

	CSV Loader			
	Control	Data	Information	notes
	read_csv	csv file	-success / fail based on if it can be opened	
	create_table_schema	csv file, sqlite	-success / fail based on valid number columns	outputs table schema to be used
	validate_entries	csv file	- check if data type is consistent for all rows	will parse for nullable columns & PK
	SQLite Setup/Schema Manager			
	Control	Data	Information	notes
	init_sqlite()	none	success/fail	add connection and cursor to init to make it persistent
	create_table()	table schema	success/fail	check for if table exists or not
	insert_into_table()	each row information	success/fail	PK id INTEGER PRIMARY KEY AUTOINCREMENT
	Query Service			
	Control	Data	Information	notes
	get_cli_command()	cin from command line	N/A	load csv, or run sql query or exit
	load_csv()	csv file	success/fail	calls on CSV Loader module
	run_sql_query()	query text	success/fail	calls on LLM Adapter and Validator modules
	exit()	exit key word	success/fail	
	SQL Validator			
	Control	Data	Information	notes
	query_type_validate	query type	success/fail	only allow SELECT queries
	table_known	query, table_name	success/fail	reject queries referencing unknown tables
	column_known	query, col_name	success/fail	reject queries referencing unknown columns
	LLM Adaptor			
	Control	Data	Information	notes
	connect_to_LLM	API key?	resp = 200	
	get_table_schema()	sqlite connection, table schema	tables exist or not	
	gen_sql()	request	request info	AI to generate SQL query from the request
	disp_results()	query results	table of results	display the SQL query results
	disp_sql_query()	query text		display the SQL query text
